https://github.com/Sahithcodes

B.Tech Artificial Intelligence student interested in machine learning, computer vision, and full-stack development. Experienced in building projects using Java, Python, MATLAB, OpenCV, and web technologies. Passionate about developing AI-driven systems to solve real-world problems.

SKILLS

Programming Languages: Java, Python, C

Web Technologies: HTML, CSS, JavaScript, Node.js

Database: MySQL

AI / Computer Vision: MATLAB, OpenCV

Computer Science Fundamentals: MATLAB, OpenCV

Tools & Platforms: Git, GitHub, VS Code

CERTIFICATES

- NPTEL - Programming in Python
- Quantum Computing Bootcamp (3-Day Program)
- HackXAmrita Open Innovation Hackathon

PROFESSIONAL EXPERIENCE

ShadowFox – AI/ML Virtual Internship (April 2026, 1 month)
AI/ML Intern | ShadowFox | Apr 2026 – Apr 2026 (Virtual) Completed a one-month AI/ML internship demonstrating exceptional performance, recognized with a certificate of completion.

EDUCATION

Amrita Vishwa Vidyapeetham, *B.Tech Artificial Intelligence*
2024 – 2028 | Amaravati , Andhra Pradesh
• Studying core areas including Data Structures, Machine Learning, Computer Networks, and Operating Systems
• Developing strong foundations in algorithms, signal processing, and intelligent systems
• Building practical experience through AI, signal processing, and full-stack development projects

PROJECTS

Water-Surface-Trash-detection-using-Yolov8,
Python, YOLOv8, MobileNetV3, PyTorch, OpenCV
• Built dual-stage pipeline using YOLOv8 + MobileNetV3, reducing false positives by 95%
• Implemented temporal tracking for stable real-time detection
• Improved performance by 30% using ROI masking

StreetSupply Hub – B2B Grocery Marketplace ,
HackXAmrita Open Innovation Hackathon | Full-Stack Web Application
• Built B2B marketplace connecting vendors and suppliers
• Developed dashboards for ordering and tracking
• Integrated AI-based price insights

IoT-Based Smart Agriculture System (Crop & Fertilizer Recommendation),
Arduino, ESP32, IoT, Embedded C
• Built IoT system using sensors for real-time soil and climate monitoring
• Designed data pipeline (Sensors → Arduino → Wi-Fi → Web App)
• Developed recommendation logic for crop and fertilizer optimization

Real-Time Object Detection with CIFAR-10 CNN + OpenCV
Integrated the trained CIFAR-10 CNN with OpenCV to build a live webcam/video classification system. Implemented center-crop inference, prediction smoothing via a sliding history window, FPS tracking, and color-coded bounding box overlays using argparse-based CLI.

Car Selling Price Predictor
Built an end-to-end regression pipeline to predict used car prices using a RandomForestRegressor with hyperparameter tuning via RandomizedSearchCV. Performed EDA, feature engineering (Car_Age), and one-hot encoding. Deployed as a Flask web app with a browser UI and JSON prediction API.

Additional Projects:
LLaMA NLP Analysis *(Python)* · AI README Studio *(Flask, Gemini API)* · Habit Tracker *(HTML/CSS/JS)* · Smart Email Spam Filter *(Java)*
